With our e-mobility solutions, health risks are minimized due to the significantly reduced effort required by the operator compared to manual pushing. The system enables the safe and ergonomic movement of loads weighing up to 500 kilograms and is characterized by drive, steering and braking support. The electric drive can be easily retrofitted to existing LKE trolleys and thus offers the opportunity to make your existing fleet more ergonomic for your employees.

ELECTRONIC DRIVE SYSTEM FOR SMALL LOAD CARRIER TROLLEYS - ERGOMOVE® 500

ERGONOMIC SENSOR GRIP

The set has an intuitive sensor handle with integrated control as standard. The display has a switch-on and drive mode button as well as a charge level indicator.

ELECTRICALLY DRIVEN FIXED CASTORS

The electrically driven fixed castors are antistatic and are characterized by a pushing force of 15 daN each. Supported speeds of up to 5 km/h are possible.

24/7 READY FOR USE DUE TO EXCHANGEABLE BATTERIES

All Ergomove systems are equipped with exchangeable batteries, so the batteries can be changed quickly and easily during operation, ensuring that the trolley is always ready for use.

PRE-ASSEMBLED OR AS A RETROFIT KIT

The Ergomove system can be retrofitted and can be seamlessly integrated into your existing fleet of LKE trolleys. We also offer trolleys that are equipped with the system ex works.
